### **SUMMARY**

I am very dedicated to my college coursework, always meet deadlines, and complete assignments and projects successfully. I will put just as much effort (if not more) as I did in college to a workplace environment. I would describe myself as dynamic, savvy, intellectual, and detail-oriented in my personal and college life. As being a quick learner of new technical, analytical, or software skills, I must say there is not any program or system I have never been able to figure out. I have one course remaining to complete my Master's Degree in Information Systems. I have earned my Bachelor's Degree in the same area of study. I am 110% confident I can handle a full time position while taking my last course to satisfy my degree objective. I love any challenge and feel I can make an impact at your organization if given the opportunity to do so.
